Computer Networks Laboratory – Equipment and Connections

1. Modem (if available)

Connects to Internet Service Provider (ISP). Converts signals and provides internet access.

2. Router

Connects LAN to other networks, forwards data packets, provides internet access, DHCP and Wi-Fi (if supported).

3. Switch

Connects multiple devices in a LAN and forwards data using MAC addresses.

4. Desktop Computer

End device used for networking practicals, runs programs and communicates over the network.

5. Smart Board

Interactive display used for teaching, presentations and demonstrations.

6. LAN Cable (UTP)

Used to connect network devices. Carries data and provides wired connectivity. Common categories: Cat5e / Cat6.

7. RJ45 Connector

8P8C connector used to terminate UTP cable and connect to devices.

8. Network Interface Card (NIC)

Enables a computer to connect to a network. Uses MAC address to transmit and receive data.
